

1) Name 5 IT job roles and write one line about what each role does.

Ans.

- **Software Developer** – Designs, writes, and tests computer programs and applications.
- **Network Administrator** – Manages and maintains an organization's computer networks to keep them running smoothly.
- **Cyber security Analyst** – Protects computer systems and data from cyber threats and security breaches.
- **Database Administrator (DBA)** – Organizes, secures, and maintains databases to ensure data is stored safely and efficiently.
- **IT Support Technician** – Helps users solve computer, software, and hardware problems and provides technical support.

2) List 3 product companies and 3 service companies with one example of work each does.

Ans.

Product Companies:

1. Microsoft – Develops software products such as Windows and Microsoft Office.
2. Google – Creates products like Google Search, Gmail, and Android.
3. Adobe – Builds creative software such as Photoshop and Acrobat.

Service Companies:

1. Tata Consultancy Services (TCS) – Provides software development and IT consulting services to businesses.
2. Infosys – Offers cloud, application development, and digital transformation services.
3. Wipro – Delivers IT support, cyber security, and business consulting services.

3) write the full forms and one-line use of: GitHub, Slack, Jira, IDE, and API.

Ans.

1. **GitHub – Git Hub**

A platform used to store, manage, and collaborate on software code using Git.

2. **Slack – Searchable Log of All Communication and Knowledge**

A team communication tool used for messaging, file sharing, and collaboration.

3. **Jira – Jira**

A project management and issue-tracking tool used by software development teams.

4. **IDE – Integrated Development Environment**

Software that provides tools to write, edit, run, and debug code.

5. **API – Application Programming Interface**

A set of rules that allows different software applications to communicate with each other.

4) Name any 5 programming languages and mention one popular use case for each.

Ans.

- **Python** – Used for data science, artificial intelligence (AI), and web development.
- **Java** – Used for developing Android applications and enterprise software.
- **C++** – Used for game development and high-performance applications.
- **JavaScript** – Used for creating interactive websites and web applications.
- **C# (C Sharp)** – Used for developing Windows applications and games with Unity.

5) What is the difference between a developer and a tester? Answer in 2 lines.

Ans.

- A **developer** writes, builds, and maintains software applications and fixes code-related issues.
- A **tester** checks the software for bugs, verifies that it works correctly, and reports issues before release.
