Session 2

Q. 1) Open MySQL Workbench or CLI and write a CREATE TABLE statement to create a table called 'restaurants' with columns: id (INT, primary key, auto-increment), name (VARCHAR(100)), location (VARCHAR(100)), and rating (DECIMAL(2,1)).

Ans. create table restaurants

(id int(11) primary key auto_increment, name varchar(100), location varchar(100), rating decimal(2,1));

Q. 2) Use the ALTER TABLE command in MySQL to add a new column 'average_cost' (INT) to your 'restaurants' table. Remember to specify the data type when adding a new column.

Ans. alter table restaurants add average_cost int(11);

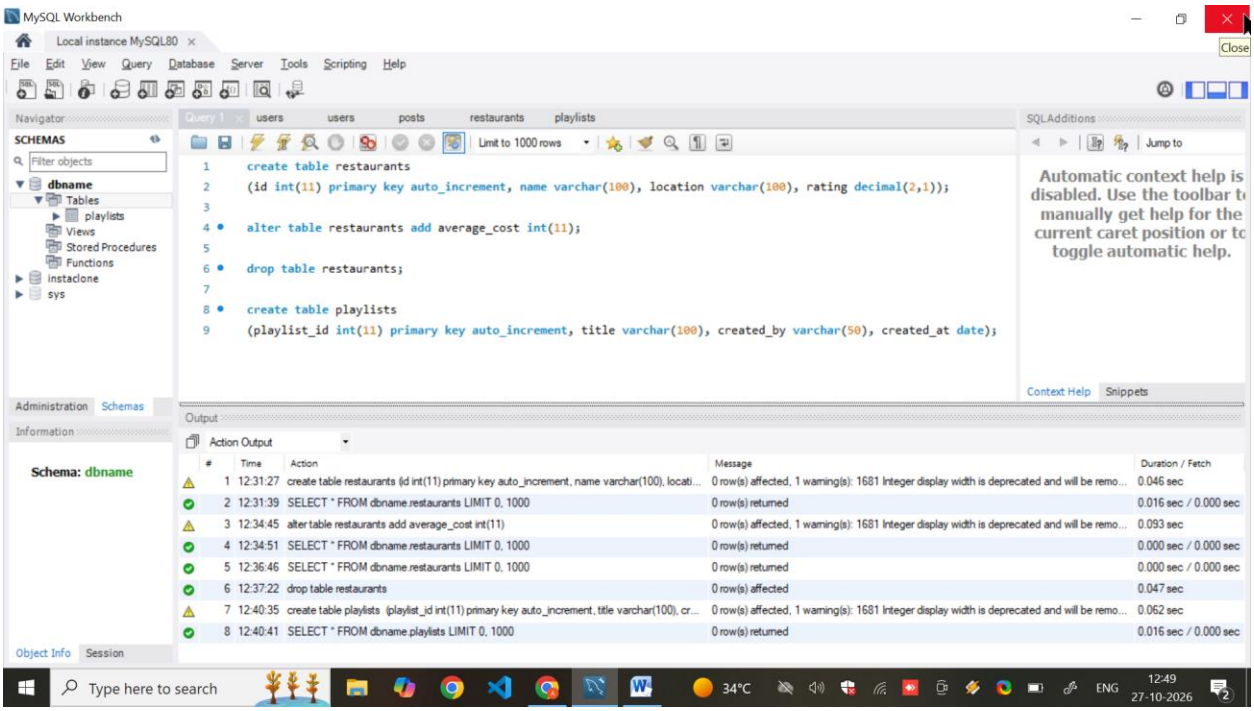

Q. 3) Write a SQL statement to DROP the 'restaurants' table you created earlier. Double-check your command before running it to avoid accidental data loss.

Ans. drop table restaurants;

Q. 4) Create a new table called 'playlists' for a music app like Spotify, with columns: playlist_id (INT, primary key, auto-increment), title (VARCHAR(50)), created_by (VARCHAR(50)), and created_at (DATE).

Ans. create table playlists

(playlist_id int(11) primary key auto_increment, title varchar(100), created_by varchar(50), created_at date);
