Session 4

Q. 1) Create a table called Playlist with columns: id, song_name, artist, genre, and play_count. Insert at least 5 sample records representing your favorite songs from Spotify.

Ans. create table playlist

(id int(11) primary key auto_increment, song_name varchar(255), artist varchar(255), genre varchar(255), play_count int(11));

insert into playlist

(song_name, artist, genre, play_count)

values

('Gods Plan', 'Drake', 'pop', 150),

('Apna Bana Le', 'Sachin-Jigar, Arijit Singh', 'Pop', 95),

('Kesariya', 'Pritam, Arijit Singh', 'Romantic', 250),

('goosebumps', 'Travis Scott feat. Kendrick Lamar', 'Hip-hop', 70),

('Without Me', 'Eminem', 'Hip-hop', 514);

Q. 2) Write a SELECT query to display only the song_name and artist from the Playlist table, but show the artist column as 'Singer' using an alias.

Ans. select song_name, artist as singer from playlist;

Q. 3) Write a SELECT query to find all songs in the Playlist table where the genre is 'Pop' and play_count is greater than 100. Sort the results by play_count in descending order.

Ans. select * from playlist where genre = 'pop' and play_count > 100;

select * from playlist order by play_count desc;

Q. 4) Use the COUNT aggregate function to find out how many songs in your Playlist table belong to the genre 'Hip-Hop'.

Ans. select count(*) as genre from playlist where genre = 'Hip-hop';

Q. 5) Write a SELECT query that shows the total number of plays (SUM of play_count) for each genre in your Playlist table, grouped by genre. Use GROUP BY with the SUM function to aggregate play counts by genre.

Ans. select sum(play_count), genre from playlist

group by genre;

select sum(play_count), count(*) as genre, genre from playlist

group by genre;
