Session 5

Q. 1) Create two tables in SQL: influencers (with influencer_id as PRIMARY KEY and name) and posts (with post_id as PRIMARY KEY, influencer_id as FOREIGN KEY, and caption). Insert at least 3 influencers and 2 posts for each influencer.

Ans. create table influencers

(influencer_id int(11) primary key auto_increment, name varchar(255));

create table posts

(post_id int(11) primary key, influencer_id int(11), caption varchar(255),

foreign key (influencer_id) references influencers(influencer_id) on update cascade on delete cascade);

insert into influencers

(name)

values

('Emma Chamberlain'),

('Chiara Ferragni'),

('James Clear');

insert into posts

(post_id, influencer_id, caption)

values

(1, 1, 'i have a very specific relationship with this particular cardigan.'),

(2, 1, 'Focus, hard work, and dedication. Always striving for more.'),

(3, 2, 'Making little moments feel special lately.'),

(4, 2, 'Soft life, strong coffee, big dreams.'),

(5, 3, 'We just spent 7 days doing something insane, video drops soon.'),

(6, 3, 'Giving away more cool stuff today, stay tuned.');

Q. 2) Write an SQL query using INNER JOIN to display each post's caption along with the name of the influencer who posted it, based on the tables you created.

Ans. select influencers.name, posts.caption

from influencers inner join posts on influencers.influencer_id = posts.influencer_id;

Q. 3) Write an SQL query using LEFT JOIN to show all influencers and their posts, including influencers who haven't posted anything yet. If an influencer has no posts, display 'No Posts' in the caption column. Use IFNULL or COALESCE to handle NULL values in the result.

Ans. insert into influencers

(name)

values

('Abhishek malan');

select influencers.name, COALESCE(posts.caption, 'No Posts') as caption

from influencers left join posts on influencers.influencer_id = posts.influencer_id;

Q. 4) Write an SQL query using RIGHT JOIN to list all posts and the corresponding influencer's name, ensuring that even posts without a matching influencer_id (if any) are shown.

Ans. insert into posts

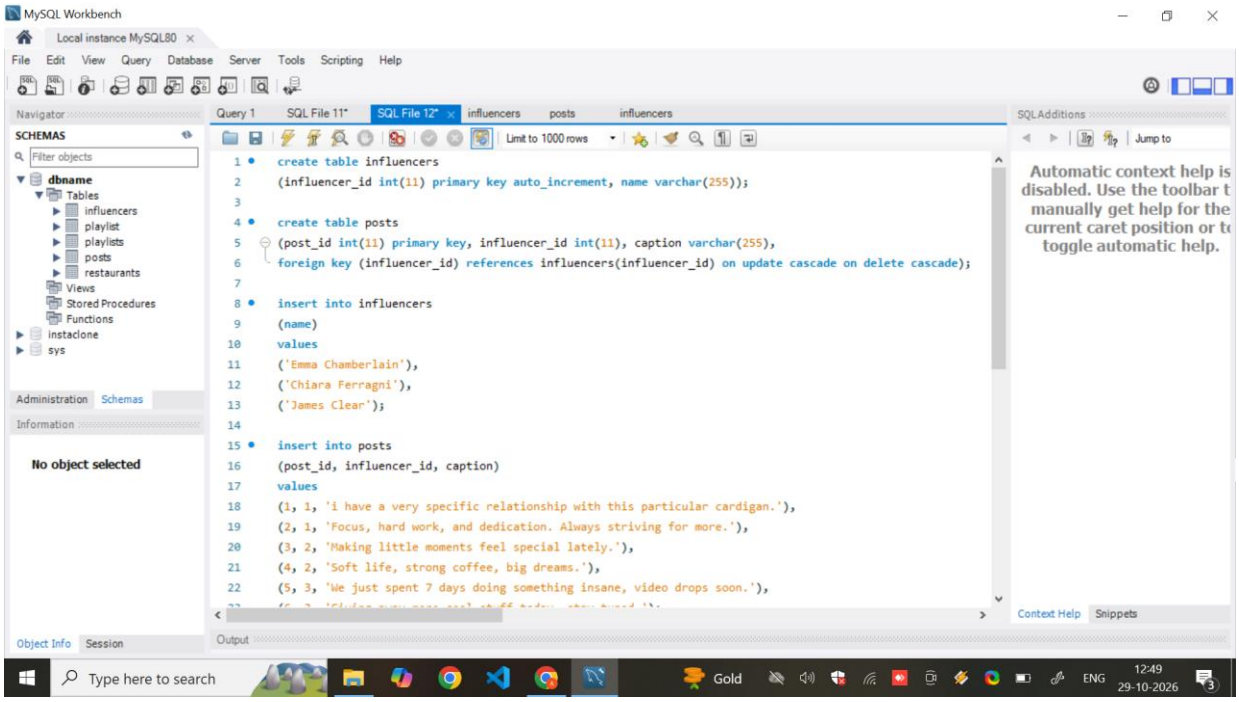

(post_id, caption)

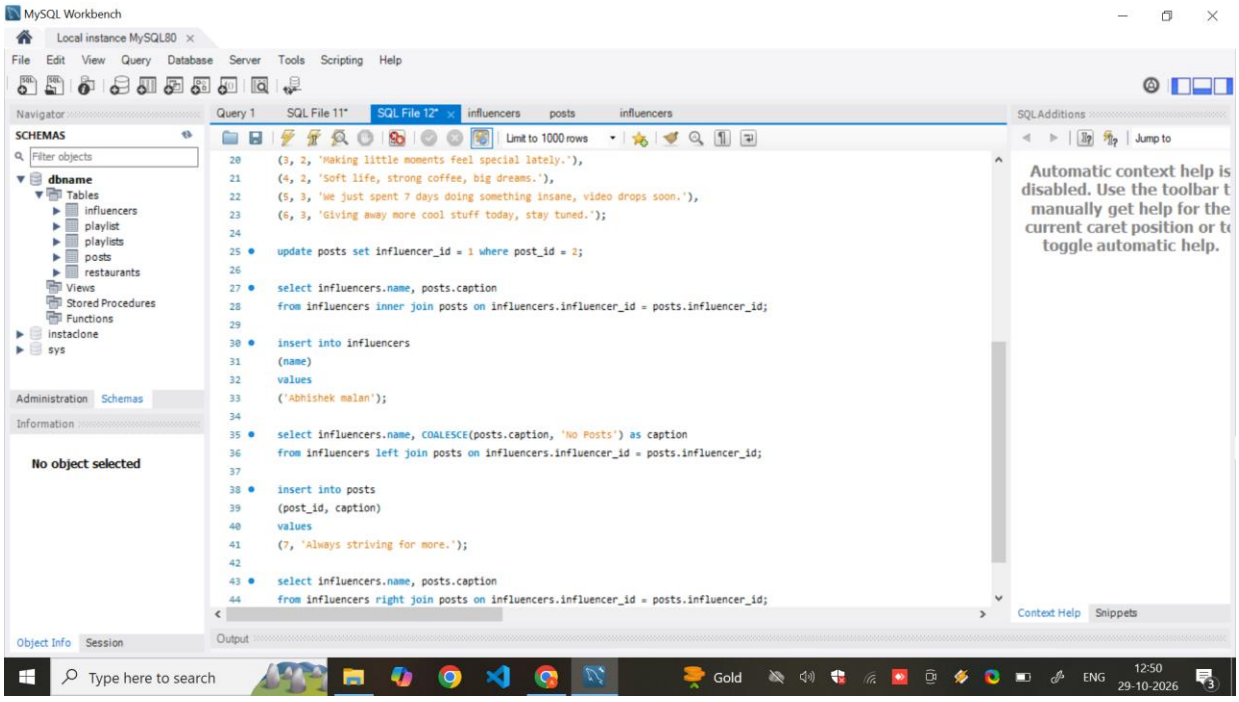

values

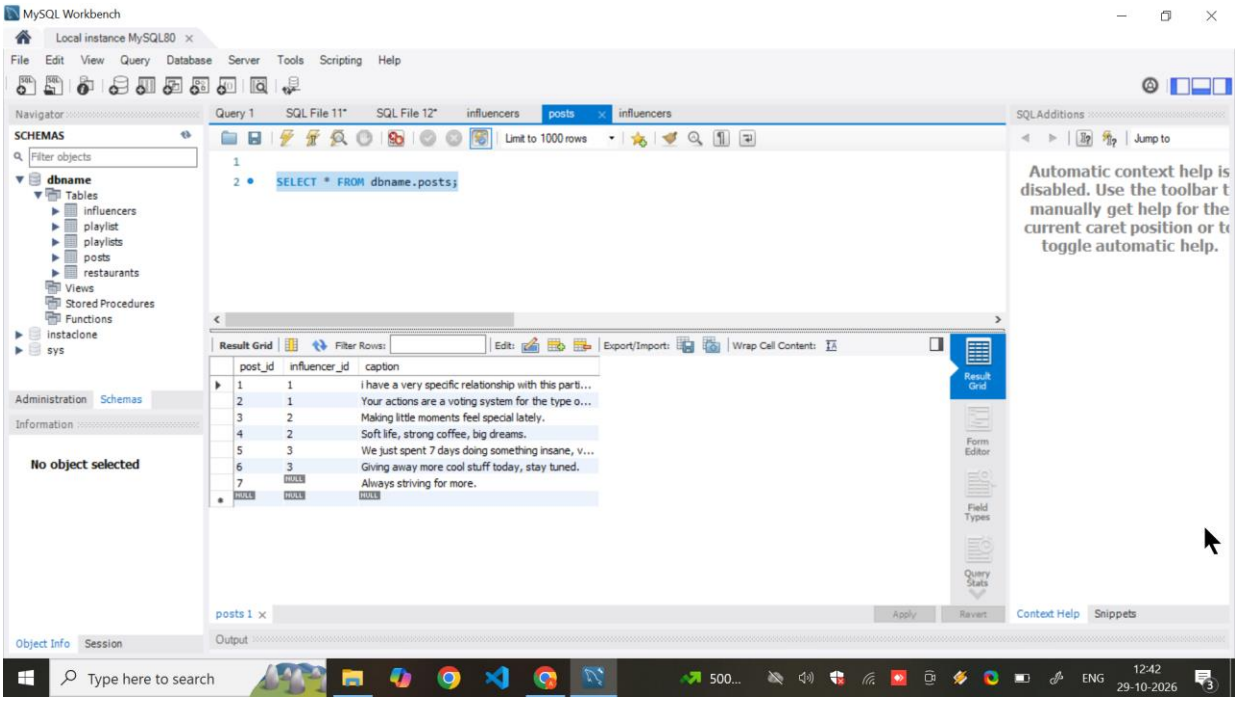

(7, 'Always striving for more.');

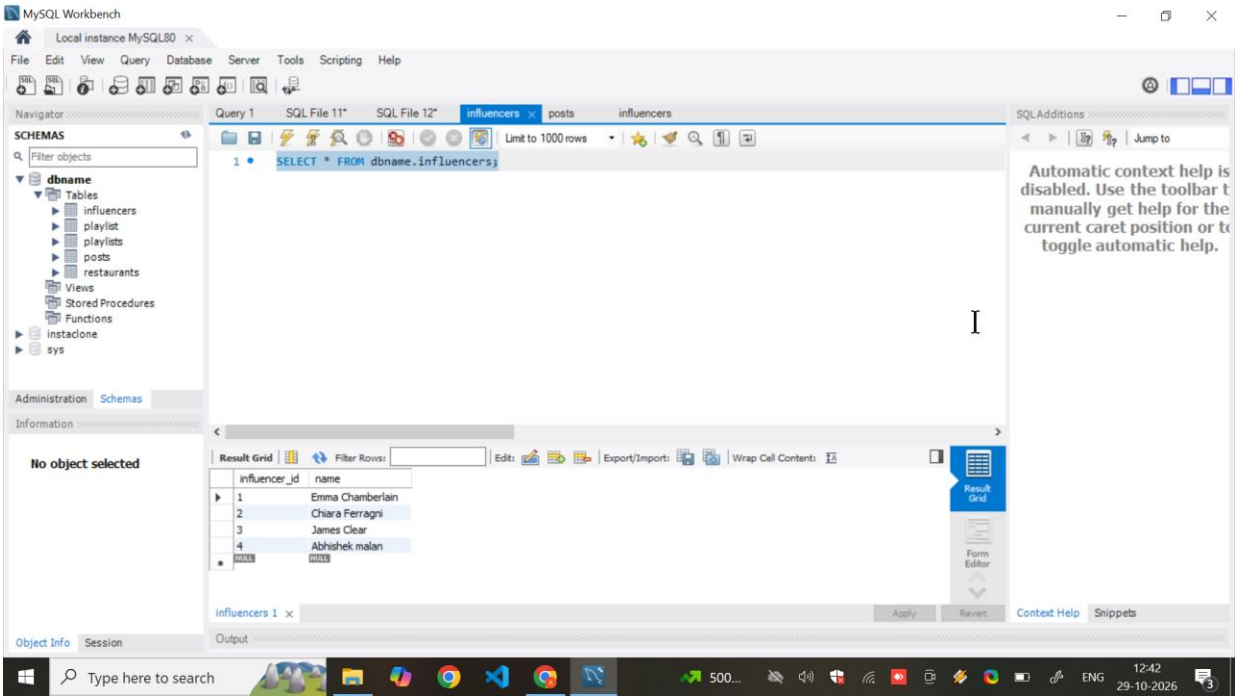

select influencers.name, posts.caption

from influencers right join posts on influencers.influencer_id = posts.influencer_id;
