

Que. Write the Git command for each: initialize a repo, stage all files, commit with a message, push to remote, pull latest changes.

Ans.

- 1) **Initialize a repository**: git init
- 2) **Stage all files**: git add.
- 3) **Commit with a message**: git commit -m "Your commit message"
- 4) **Push to the remote repository**: git push origin main
- 5) **Pull the latest changes**: git pull origin main

Que. What is the difference between git fetch and git pull? Answer in 2 lines.

Ans.

- git fetch downloads the latest changes from the remote repository but does not merge them into your current branch.
- git pull downloads the latest changes and automatically merges them into your current branch.

Que. Create a new GitHub repository, push any small text file from your local system, and share the repo link.

Ans. <https://github.com/agamshah145-pixel/my-first-repo>

Que. What is the difference between a Fork and a Pull Request? Answer in 2 lines.

Ans.

- **Fork** creates a copy of someone else's repository in your own GitHub account so you can make changes independently.
- **Pull Request (PR)** is a request to merge your changes from a fork or branch into the original repository.

Que. Create a new branch named feature-test, make one commit on it, and merge it back to the main branch. Write the commands you used.

Ans.

Create and switch to a new branch

```
git checkout -b feature-test
```

Make changes to a file, then stage and commit

```
git add .
```

```
git commit -m "Added changes in feature-test branch"
```

Switch back to the main branch

```
git checkout main
```

Merge the feature-test branch into main

```
git merge feature-test
```

(Optional) Push the updated main branch to GitHub

```
git push origin main
```
