

Session 1

- 1) Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, Paytm).

Ans. A program is a set of instructions written in a programming language that tells a computer or mobile device how to perform a specific task. Programs are used in almost every app we use in daily life. For example, Paytm uses programs to allow users to send and receive money, pay bills, recharge mobile phones, and make online payments. The program processes the user's input and performs the requested task.

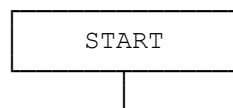

- 2) List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both. Think of languages like Java, Python, and JavaScript.

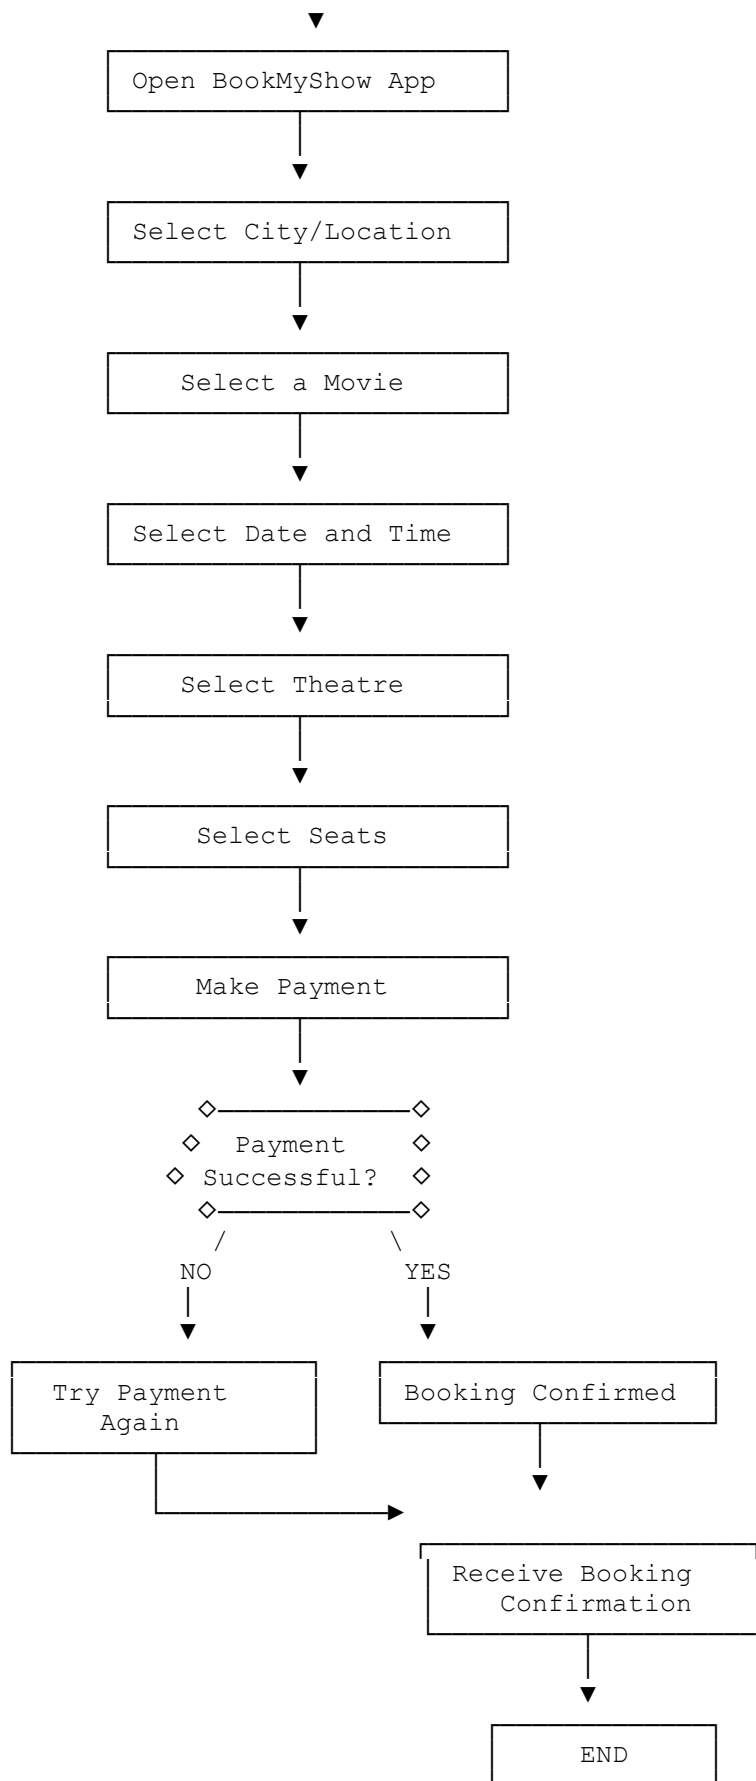

Ans.

Programming Language	Usually	Explanation
Java	Compiled	Java code is compiled into bytecode, which runs on the JVM (Java Virtual Machine).
Python	Interpreted	Python is generally executed by an interpreter, though it is first compiled into bytecode internally.
JavaScript	Both	Modern JavaScript engines use JIT (Just-In-Time) compilation along with interpretation techniques.

- 3) Draw a flowchart (on paper or using any online tool) for the process of booking a movie ticket on BookMyShow, starting from opening the app to receiving the booking confirmation.

Ans. MOVIE TICKET BOOKING:

Flow:

Start → Open App → Select City → Select Movie → Select Date & Time → Select Theatre → Select Seats → Make Payment → Check Payment → Booking Confirmation → Receive Confirmation → End.

- 4) Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.

Ans. Algorithm: Ordering Food on Swiggy

- **Start**
- Open the **Swiggy** app.
- Enter or select your **delivery location**.
- Search for a **restaurant or food item**.
- Select the desired **restaurant**.
- Select the **food item** you want to order.
- Add the food item to the **cart**.
- Open the **cart** and check the order details.
- Select or enter the **delivery address**.
- Choose a **payment method**.
- Click on **Pay Now**.
- Check whether the payment is successful.
- If payment is unsuccessful, select another payment method and try again.
- If payment is successful, the **order is confirmed**.
- **Stop**.
